Recipe Recommender System

Agenda

- 1 Intro
- 2 Demo
- 3 Process
- 4 Results

What's for dinner tonight? 🤔

- Can't decide
- Same repetitive meals
- Give up & order take-out
- Discover personalized content
- Surface new recipes
- Prepare for grocery runs

Machine Learning Problem

Given a person's preferences in past recipes, could I **predict** other new recipes they might enjoy?

Use Recommender Systems

1A Collaborative Filtering

Cosine Similarity

1B Content Filtering

Solves cold start problem

But ... curse of dimensionality

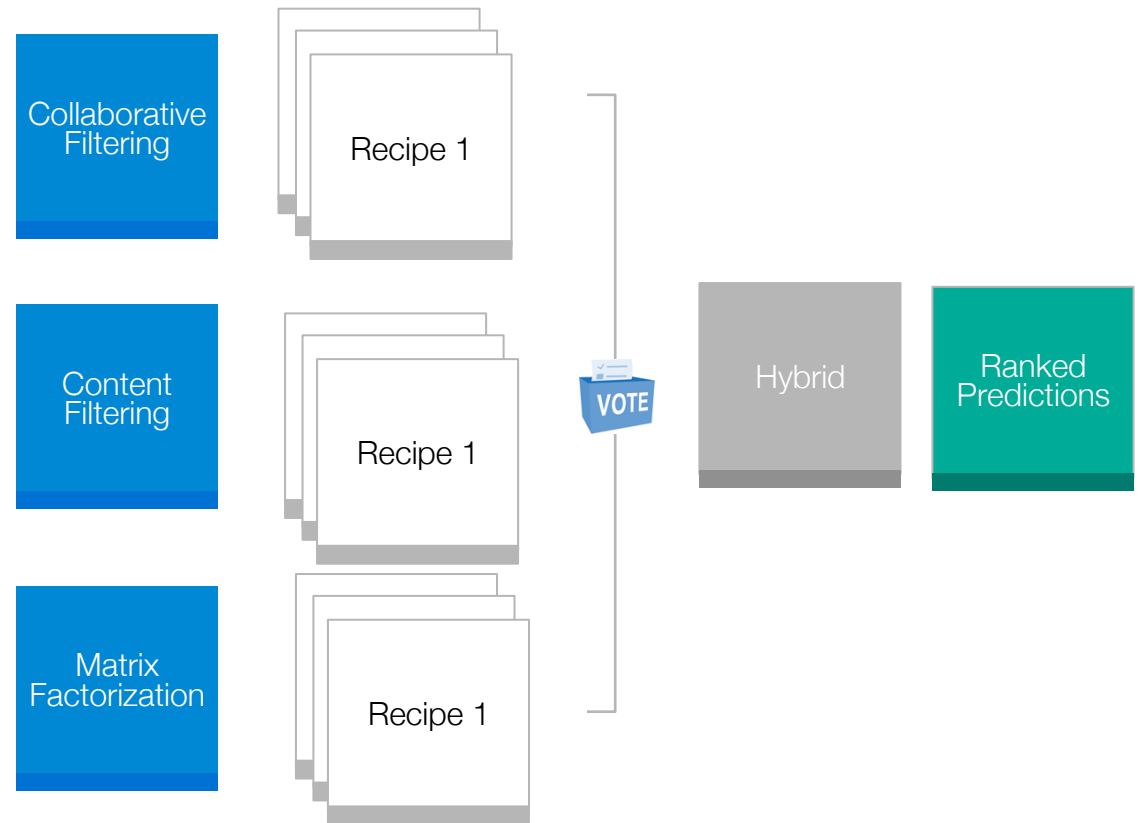

2 Matrix Factorization

Dimensionality reduction to
predict ratings with latent factors

1000 \rightarrow 100 components
explains 55% of variance

Put it all
together in a
hybrid model

Ensemble

learning

Model Evaluation

	Naïve Model	Collaborative Recommender	Item Recommender	Factorization Recommender
Test RMSE	4.6	n/a	n/a	0.30
Precision at 6	0%	33%	17%	80%
Recall at 6	0%	3%	2%	4%

What fraction of recommended items did user consumed?

“Out of all items the user consumed, what was recommended?”

Challenges

- More compute 🐌
- No Public API 😭

Version 2.0

- Natural Language Processing on user reviews & topic modeling
- Further testing with new user data

Thanks! That's a wrap.

I hope this inspires you to
try something fresh in the
kitchen.
